

Evolving with Customer Needs for Managing Video

Industry Problems:

- Consistent quality surveillance of ATM machines/branch banks.
- Prevention of fraud in banking transactions.
- Prevention of theft and robbery.
- Elimination of human error in financial transactions.
- Maintaining sufficient video records of transactions.

How we can help/Solutions:

Dedicated Micros provides a broad range of digital video management solutions that serve the need for quality and reliability, as well as the large video storage capacity needed in the financial industry. Dedicated Micros' digital video recorder systems are easy to install and use, so even personnel that are not security professionals can operate the system without hassles. Teller window transactions can be monitored, with instant retrieval of incidents. ATM video surveillance and security can be enhanced by a transaction text software interface. Recording schedules are available to allow for maximum recording storage.

Remote monitoring capabilities provide surveillance from desktop computers, giving management and security personnel the ability to view multiple locations without having to leave their offices. Automatically download event recording from multiple DVRs to a central server-without affecting the video server's recording. All video recordings are captured with digital encryption, so that video is tamper proof, providing important evidence when combating theft.
